SUMMARY

Backend Developer with hands-on experience in building scalable, high-performance systems using Node.js, Express, SQL/NoSQL databases, distributed queues, and cloud platforms. Delivered measurable impact through SQL optimization, fault-tolerant workflow design, and reliable API architectures. Skilled in asynchronous processing, system design, and data pipelines, with a strong focus on backend reliability engineering. Winner of the Smart India Hackathon 2024, passionate about shipping secure, efficient, and production-ready backend services.

EDUCATION

B.E. Computer Engineering — Graduated May 2025
University of Mumbai, India — 9.22 CGPA

TECHNICAL SKILLS

Backend: Node.js, Express.js, ASP .NET, REST, GraphQL, Dapper
Cloud & DevOps: AWS, Azure, Docker, CI/CD, Kubernetes
Databases & ORM: Prisma, MySQL, PostgreSQL, MongoDB, SQL Server
Frontend: React, Next.js, Tailwind
Programming: C, Java, Python, JavaScript, TypeScript

PROFESSIONAL EXPERIENCE

Zeus Learning — July 24 - Present

Backend developer with experience building scalable systems, & designing reliable distributed processing workflows.

- Re-architected backend retry workflows using asynchronous execution, parallel processing, & short-circuit logic, reducing reprocessing load by **50%**.
- Designed & implemented a distributed message-processing system using Azure Storage Queues to replace an in-memory .NET queue achieving zero data loss, predictable retries, & parallel execution.
- Optimized SQL Server Stored Procedures, reducing execution time by **50%** & eliminating **70%** of deadlocks in high-volume operations.
- Worked extensively with Azure Synapse Analytics, performing granular data transformations, ETL workflows, & cross-database integrations using SQL Server, Cosmos DB, & orchestrated pipelines.
- Identified & remediated Open Redirection vulnerabilities, strengthening backend security.
- Improved UI reliability by fixing issues related to popper rendering, caching logic, & React memoization, ensuring more predictable client–server interactions.

PROJECTS

VeriSure (Smart India Hackathon 2024) | Github — August 2024 - January 2025

Developed a document verification system using AI for real-time document classification, labeling, & verification, achieving 1st place in the **Smart India Hackathon 2024 - Software Edition.**

- Successfully validated documents in multiple formats (PDFs, images), contributing to a **90%** improvement in operational efficiency.
- Integrated ML models for document classification (using a **99.5%** accuracy rate) & OCR, reducing manual verification time by **75%**.
- Using Node.js, Django Rest Framework (DRF) & Next.js to build a scalable back-end & front-end, handling over 1,000 document Classification per minute during the hackathon.

ACHIEVEMENTS

Winner, Smart India Hackathon (SIH) 2024 — December 2024

- Led a 6-member team, buliding a MVP for an AI based document verification system in 36-hours that won us the 1st place at the national Smart India Hackathon (SIH) 2024.

Vice President, Computer Engineering Student Society (CESS) — 2024-25

- Spearheaded the organization of a national-level hackathon, managing cross-team coordination, logistics, and event execution at campus scale.
